

## 8<sup>th</sup> Annual Philadelphia-Japan Health Sciences Dialogue

Monday, October 1 & Tuesday, October 2, 2007  
The Union League of Philadelphia

### *Aging Populations: Neurodegenerative Diseases, Psychiatric Therapies*

Neurodegenerative diseases such as Alzheimer's disease and Parkinsons' disease not only put stress on patients and their families, but also cause monumental societal problems, particularly in countries with aging populations. Both the capacity for and cost of care are serious problems today, and will grow more severe in the coming years. Japan's demographic profile suggests that the crisis will be faced sooner than in the United States, but without a doubt, both countries will have to deal with it early in this century. In the meantime, companies in both countries are seeking diagnostic and therapeutic approaches that may serve to lessen the coming burden. The 8<sup>th</sup> Annual Philadelphia-Japan Health Sciences Dialogue, featuring distinguished leaders in the field, is designed to take stock of what is happening in Japan and the United States to address this problem.

#### **Program Outline**

(As of May 1, 2007; Subject to change)

#### **Monday, October 1, 2007**

**5:30 PM**
